

## CHLORIDE POINT ACTIVE

Lion Hill Stock Sets the Pace in the Pit.

## NORTHERN LIGHT ADVANCE

GALENA IN GOOD FORM AND RECORDS SALES.

Sixty Feet of Sapolo—One of the Many of Utah's Natural Mineral Resources—Inexhaustible Deposits of Nature's Soap—Last Chance Gulch Placers—Increased Output From the Mines of Bingham—Black Dragon Strike—High-Grade Lead Ore From a West Tintic Mine—Ontario Ore Extraction—Increased Force Put on at the Anchor Concentrator—The Genuine Stuff—Tabor and Stratton—An Up-to-Date Mill—Mineral Surveys Ordered—At the Bedding—Another Incorporation—Ore and Bullion—Silver and Lead—Mining Notes and Personals.

There was a hot time in the pit of the Mining Exchange yesterday and stock transfers were made with unexampled rapidity. In fact, it was a banner day on the floor and a great deal of enthusiasm characterized the transactions of the call.

As a general thing the tone of the stock market was good and advances were noted in several of the stocks, listed as well as unlisted, but it was Chloride Point that caused the furor and excitement of the hour, and before the close this security had recorded marked gains as well as a large number of transfers. Broker Tibbals being the chief buyer, and he stood ready to take all the stock offered at the figures given below, the sales only closing when the brokers were out of C. P. stock.

During the call of the listed securities Galena made the initial sale and recorded transfers at 60 cents, which was an advance over previous quotations. Four Aces followed with quite a block, but at a decline, while trading was brisk when Northern Light was called, and sales were registered at an advance over the transfers of the previous day, the stock closing strong and in good favor. Geyser-Marion was inactive, but firm, at former quotations, while Mercur continued on its upward course and at the close was quoted at \$1.90 bid and \$1.95 asked. Nothing was done in Mammoth, although the stock had many friends in the pit.

In the unlisted stocks Swansea was a favorite at \$1.55 in the bidding, with holders firm at \$1.60. South Swansea also made gains in the bidding and at the close had advanced to \$1.50, at \$1.55 asked. Sacramento was firm, but unchanged, at \$1.20 bid and \$1.25 asked. The transactions of the day were as follows:

## W. E. HUBBARD &amp; CO.

Real Estate.  
214 x 10 rods, 4 room cottage, Ninth South, near N. W. corner of Liberty Park—Bargain, \$800.00.  
7 room modern brick cottage, choice, close in, location north bench—\$2,500.  
414 x 10 rods, Ninth East, 5 room cottage, bath, city water, etc., \$2,100.

## SIXTY FEET OF SAPOLO.

One of the Many of Utah's Natural Mineral Resources.  
While Utah has long been noted for its natural mineral resources, it was not known until a short time ago that within about six miles from Salt Lake there was a deposit of sapolo, or pure silica, or that this commodity existed in such enormous quantities that the good houses of this city could use from it for a century as a cleaning compound and then not materially lessen the supply.

For some time work has been in progress in the development of this body of sapolo and a tunnel has been run in it a distance of 62 feet without revealing its extent and size, and The Herald is informed that the whole of this mountain of silica is pure stuff, and that it can be utilized in the manufacture of soaps, sapolo bars and for polishing purposes without first going through the process of refining.  
This mammoth deposit of mineral, for such it surely should be called, is owned by George Dimmick, Will and Dave Griffiths, of this city, who have disposed of it on a bond and lease to New York parties, the bond calling for the payment of \$12,500 within a specified time, and in the meantime a force of four men is to be employed in the work in the development of the property, and trial shipments are to be made from time to time to New York, a carload shipment being even now on the way.  
Mr. C. Vanautin, the representative of the syndicate which succeeded in ty-

ing this valuable piece of property, has just returned to the east, after making a thorough examination of the soap mine, for it is nothing more, and it is expected that within a year the world will be using Utah sapolo, or fine toilet soaps, in which it will figure as one of the chief ingredients.  
In Millard county there is a mammoth deposit of pumice of splendid grade, the only known deposit of this character on this continent, and this, too, has fallen into the hands of eastern capitalists, and now a Chicago firm is placing it on the market in manufactured form, which is as fine as can be found in any country.

## LAST CHANCE GULCH PLACERS.

Increased Ore Output From the Mines of Bingham.  
The Bingham Bulletin, in its weekly mining review, says, in its issue of October 29, that the placer property extending through Last Chance gulch, in its intention to work bedrock from a point near the junction of that gulch with Carr fork, up to the Stewart No. 1 mill site. Work will be prosecuted through a tunnel to bed rock, and the gravel situated will be jigged. The gentleman has just completed a water power fluming plant. The venture will prove a success there can be no doubt, as it is well known that thousands of dollars in quick amalgam and fine gold went down the gulch from the Stewart No. 1 mill during its operation.

## ORE SHIPMENTS.

The shipments from Bingham during the month ending Oct. 31, were as follows:  
From Bingham station—hailed by Standish & Jamison: Tons  
Old Jordan & Galena ..... 1,325  
Utah and Boy ..... 90  
Spanish ..... 70  
Neptune ..... 40  
Northern Chief ..... 25  
Giant Chief ..... 30  
Savage ..... 35  
Hauled by Tom Mayne:  
Old Telegraph ..... 450  
Phoenix ..... 150  
Eighty-nine ..... 50  
Savage ..... 50  
Hauled by Joe Shelby:  
Stacy ..... 142  
Vindicator ..... 78  
Leviathan ..... 78  
Savage ..... 50  
Wisconsin ..... 350  
Leadville station—by train:  
Dillon & Lusk ..... 330  
Percussion ..... 250  
Keystone ..... 25  
Golden Opportunity ..... 25  
Lead mine ..... 25  
All other sources ..... 100

## Total tons ..... 4,722

## Shipments for September ..... 3,710

## Increase, October ..... 1,012

No less than half a dozen new companies have been formed during the past season to develop Bingham mining property. While none of them are yet in operation, they have secured resources for the development of properties that would otherwise lie idle, and as a whole, their operations will prove important. They will give employment to many men, and very promising claims are represented in their holdings. If they only work with the good sense and direction that has characterized the operations of the Frisco, Missouri, and other companies, it is certain that there will be several additions to the producing mines of the camp.

## DIPS AND SPURS.

A two-carload lot is coming down from the Neptune, and also 10 tons from the Burning Mountain.  
In the 400 level of the Winnamuck 200 feet of drifting is completed, and there is reason to expect that ore will soon be broken into.  
After having cleaned out the old workings of the Stewart No. 1, the party holding an option on that property have stopped all work, and discharged their crew.  
Bingham leads all Utah camps in the volume of ore shipments during October. It is little less than larger than that of any other month of the year.  
Work at the Highland Boy property is being pushed with a vim, characteristic of Manager Wey, while the mill is running smoothly under the watchful eye of Superintendent A. J. Bortles.  
The Argus company, operating just below Dry Creek, has done considerable work this summer, and their property is looking fine. They will now run three shifts, and put up a boarding and bunk house, etc. J. W. Jones is superintendent, and R. K. Smith foreman.

## BLACK DRAGON STRIKE.

## High-Grade Lead Ore From a West Tintic Mine.

In its weekly roundup of the mining news of the camp, the Tintic Miner says:  
S. E. Cramer has let to Schupp Bros. a contract to sink the shaft on the Nellie Harris 100 foot deep. They have moved a while on the property, and will at once begin work.  
W. S. Straffenberg yesterday exhibited some fine specimens of copper from some claims in the Erickson district. With the building of the Deep Creek road Billy has a bonanza.

The contractors on the Sunbeam were forced to abandon work on account of water. They were sinking the shaft from the 25-foot level, and had worked but a couple of days when the hole began filling up on them.

B. F. Fischer went through camp Monday on his way from Deep Canyon to Prove to vote. He reports two men at work on the Blaine mine, and will return to that district in a few days to superintend operations.

Captain Ryan reports a very favorable change this week in the West Cable. A vein of quartz has been encountered which looks most favorable. Captain Ryan believes that the works are now rapidly approaching the pay zone which cuts this property.

G. H. Robinson, W. T. Craig, Harry Johnson and John Rupper, who are working the Joe Bowers No. 2, in the Silver City and at the district, on a lease and bond, shipped a car of good ore this week. A night shift has been put on, and the work will be pushed vigorously.

The work of straightening the shaft in the Lower Mammoth is about completed, and the machinery has already been placed. Some very rich ore has been exposed, and as soon as the mine is placed in order for continuous work, a shipment will be made that should occur in time to furnish subject matter for Thanksgiving.

The owners of the Black Dragon made no mistake when they told Superintendent Marx to follow out his own opinion in working that property. He immediately began sinking a new shaft and within a few feet of the surface put into a good sized vein of gray copper, which, it is believed, will be found quite rich in the white metal. Work is being continued on the new shaft, and the owners are reasonably certain of some good pay ore in the near future.

Shipments from the district for the week are as follows: From the Gemini, 4 carloads; from the Swansea, 4 carloads; from the Sioux mill, 3 carloads; from the Dragon Iron mine, 3 carloads; from the South Swansea, 5 carloads; from the Joe Bowers No. 2, 2 carloads; from the Mammoth mine, 2 carloads; from the Mammoth mill, 2 carloads; from the Mammoth mill, 2 carloads; from the Mammoth mill, 2 carloads.

At the Bedding.

Professor W. H. Tibbals, who has charge of the development of the Redwing mine at Bingham, returned Friday night from making an inspection of this property, which, he states, is in excellent shape with a large amount of good ore sighted. In fact, he estimates that at the least calculation there are 2,000 tons of mineral blocks out in the mine, much of which will carry metallic values of 50 per cent copper and 80 ounces in silver to the ton.

At the present time, in order to facilitate the extraction of ore, a lower tunnel is being run in the expectation that it will cut the vein at least 120 feet below the upper workings. This tunnel is now in a distance of 175 feet and the showing in the face would indicate the near presence of an ore body, and as soon as connections are made the company will be in good shape for regular and heavy shipments and the payment of dividends later on.

Another Incorporation.

Articles of incorporation of the Salt

Lake and Nevada Gold Mining and Milling company, whose property is located in Ocoella mining district, were filed with the county clerk yesterday. The capital stock consists of 100,000 25-cent shares, and the officers are: Nat Ward Fitzgerald, president; J. W. Power, vice-president and general manager; W. E. Cooper, secretary, and D. C. Roberts, treasurer.

Mineral Surveys Ordered.

During the past week the surveyor general has ordered the making of mineral surveys for rent as follows:  
No. 3550, for the Fillmore lode in Clifton mining district. Application made by R. C. Chambers. A. D. Ferron, surveyor.  
Nos. 3551 to 3556, inclusive, for the Golden Chest, Silver Link, Gilt Edge, Seven-Thirty, Wild Cat and Wins Up lodes in Snake Creek district. Application made by the Anchor Mining company through its attorney, G. W. Parks. J. F. Smith, surveyor.

Silver and Lead.

The silver and lead quotations yesterday were as follows:  
Bar silver, 57 1/2 cents.  
Lead, brokers', \$1.75.  
Copper, brokers', \$10.87 1/2; casting, \$10.25.

Ore and Bullion.

The ore and bullion receipts yesterday were as follows:  
McCormick & Co., bullion, \$9,850.  
T. R. Jones & Co., ores, \$3,500; bullion, \$6,500.  
Bamberger & McMillan, ores, \$9,019.

Mining Notes and Personals.

E. J. Dockery has returned from Chicago, where he has been on mining business.

F. J. Donohue has returned from Idaho, where he has been on mining business.

The semi-monthly shipment of Mercur cyanides, valued at about \$24,000, was sampled in this city yesterday.

The McKinley Mining company yesterday let a contract for 100 feet of additional tunnel work in its Lion Hill property.

It is expected that the new concentrator at the Crystal mine, near Marysville, will be started up by the middle of this week.

Sales of Sacramento were reported on the streets yesterday at 25 1/2 cents and the stock was very firm at this figure with an upward tendency noticeable.

George Kinsbury, one of Captain J. R. DeLamar's mining experts, has returned from another trip into the mountains, where he has been making examinations of mining properties.

Mercur stock was very strong on the streets yesterday and this regular dividend payer is steadily climbing upward. With its present outlook the stock should go to \$10 within six months.

W. W. Chisholm and J. D. Kendall of the Centennial-Eureka, have returned from their pleasure resort on Klamath lake, in Oregon, and report having had a very pleasant outing.

The Black Diamond company has received word from Stockton that the vein in the company's mine has widened out to three feet of pay ore and that ore bins are being built at the works.

It is understood that a Chicago company is working a force of 15 men at the old Rolling mine, in Lincoln district, Beaver county, and that a fine body of high grade lead ore has been disclosed in the property.

The Horn Silver Mining company is still short of men for its mine at Auspice, Salt Lake, and is looking for men and employment there at the present time.

There was an active demand on the curb yesterday afternoon for South Swansea at \$1.30, the lowest offering being at \$1.20, and it is claimed that the splendid showing in the mine will justify the payment of a higher figure than this.

Sam Pollock, of the Hercules, on Lion Hill, who was in the city yesterday, states that the property is looking in elegant shape and that from present indications it is only a question of depth before a large body of high grade mineral will be uncovered.

It is learned that Patsy Sullivan, a Mercur printer and newspaper man, has become so highly imbued with the flattering outlook for Beaver Lake district that he has left for the south with the intention of establishing a newspaper in this promising camp.

Wasatch Cor. Coalville Times: A nugget of native gold, the size of a pea, which had been washed out of a piece of rock the size of a hen's egg, was shown to the writer by an Evanston gentleman Friday. The yellow stuff was found on the head of Bear river.

Millford Index: Dr. Steele and Sheriff Barton are highly elated over the showing in their copper property, the Skylark, situated in Beaver Lake mining district. The promise of something immense in the way of a bonanza is equal to anything in that great camp.

Dan Reber, of the Golden King mine, near Mountain Home, Ida., is in the city on mining business. Mr. Reber brought down with him some fine samples of ore from the mine and it is stated that a large body of high grade gold has been uncovered in this property.

Encouraging news has been received from the Columbia mine in Tooele county and the foreman writes T. A. Wickersham that a vein ranging from six inches to two feet in width has been uncovered in which there are good stringers of high grade galena ore, while the whole body is highly mineralized.

George St. Clair, superintendent of the Italian, near Leesburg, Ida., writes that a fine body of high grade ore has been disclosed in the bottom of the new working shaft, some of which is very rich in the yellow metal, while in the stones the ore bodies are increasing in size as work progresses. The mill at the mine is running in a most satisfactory manner.

Herald, Wells, Nev.: Captain W. I. Plumb came down from Van Duzer a few days ago and reports everything in that camp O. K. He says all the claims on the creek will be worked through the winter by drifting on bedrock and timbering the frozen surface, as was done last winter on a few claims. Mr. Plumb is superintending the Harris claims.

Recorder, Salmon City, Ida.: J. F. Allen has his new mill at Gibbonsville ready to start up. It is built so near to the mine that the ore can be easily and cheaply handled. The tunnel run by him is now in 600 feet and three shafts have been cut. No. 1 assayed 420; No. 2, 315.20; No. 3, 24.80. There is a great quantity of this ore and he expects to run the mill steadily.

It is learned that quite a block of the stock of the Beaver Lake Copper company changed hands yesterday. The management of this property is confident that this mine will eventually become a formidable rival to the great copper properties of Montana, and one thing is certain, and this is that the

There is not more foundation for the report than there is. We are advised by Manager Allen that while the directors of the Centennial-Eureka Mining company anticipated that a ready-made mill plant to reduce the low grade ores of that property, still the matter of the erection of such a plant has never been considered in a district meeting. It will come, and probably next spring, and when it does the dividend paying power of the Centennial-Eureka should be doubled.

Ontario Ore Extraction.

Increased Force Put on at the Anchor Concentrator.  
Park City, Nov. 6.—A few cars of milling ore are yet being hoisted each day at Ontario No. 3.  
The Park City sampler has received this week 13 tons of Malpais siliceous concentrates.  
The works of the Alice prospect have been covered with buildings, that will enable the men to sink the shaft, which is now down to 350 feet, to which 50 more feet will be added before a drift is started in quest of the ledge. The management of this event is a night shift will be put on at the Anchor concentrator to operate the pulverizers and tables.  
Mc D. A. Gills, a Silver King miner, and another lead and silver miner, the Third ward, went to Salt Lake today to recuperate at the Holy Cross hospital.

The Genuine Stuff.

Flow of Crude Petroleum in the Waters of the Lake.  
According to reports received yesterday by Captain J. Witherell, says the Ogden Standard, there have been discovered wells of crude petroleum in the northwest of the shore of the lake, and near Fremont island. The find was originally made by a couple of hunters who were crossing the lake, and they began to investigate. Some of the stuff was taken to Salt Lake and a few drive wells, sunk, so that now it is being pumped out. The wells are owned by Salt Lake and parts by a Mr. Farley of Hooper, who made the discovery.

Tabor and Stratton.

H. A. W. Tabor, the ex-senator and ex-millionaire of Colorado, says the Bingham Bulletin, has been in straitened circumstances for several years and knows the bitter experience of having the cold shoulder turned to him by wealthy men who got their start from his own hand. He is a man of short comings, but faithfulness is not one of them, and if the professed friends who fawned around him in his golden days had only been half as true as the word of "the old man" is reliable, he would be a millionaire still. The writer knows Mr. Tabor well and is pleased to find in the Denver Mining Record a romantic story of him in connection with Stratton, the Cripple Creek millionaire. The former Leadville bonanza king owns good mining property in Mexico, but recently had to put up gold to save it and was at his wits' end to raise the money. He finally concluded to ask Stratton to lend it to him. Going to Colorado Springs, he met him, and Tabor told Stratton that he was in a bad way. Stratton sympathetically giving an answer. The same evening, however, he went to Tabor's hotel and handed him ten \$1,000 bills, telling him to make up the use of it as he desired. At the same time Stratton said: "If you can ever conveniently return it, do so; if not do not consider there is any obligation in the matter." Tabor's story has the effect of reviving one's faith in human nature, and for Mr. Tabor's sake we trust the story is not only not a mere newspaper yarn, but that Mr. Stratton's generosity will result in restoring his fortune.

An Up-to-Date Mill.

From W. E. Hubbard, who has just returned from a visit of inspection of the Chloride Point mine and mill, it is learned that the mill building is now under cover and that it is ready for the machinery, which is now on the way from the east.

In speaking of the plant Mr. Hubbard says that it will be one of the most substantial and complete reduction works ever erected in the west, and that it will be up to date in every respect and equipped with all modern improvements and appliances.

Work in the erection of the structure has been vigorously pushed from the start, and the company is well pleased with the way Charlie Ford, the contractor has handled the enterprise, while in the mine there is another cause of congratulation, as the developments there, under the supervision of Superintendent George Clark, demand that a thorough mine has been back of all that has been done in the opening up of this magnificent property, in which, where there is now in progress, there is a breast of ore that is 40 feet thick and the footwall has not yet been found. This body is all high grade milling ore and will average all of 40 ounces silver and \$350 in gold to the ton, while in this chute of minerals there is a three-foot pay streak that will carry 135 to 150 ounces silver and \$5 in gold to the ton, and it is freer than the richest of Montana, and one to two carloads of ore a week.

At the Bedding.

Professor W. H. Tibbals, who has charge of the development of the Redwing mine at Bingham, returned Friday night from making an inspection of this property, which, he states, is in excellent shape with a large amount of good ore sighted. In fact, he estimates that at the least calculation there are 2,000 tons of mineral blocks out in the mine, much of which will carry metallic values of 50 per cent copper and 80 ounces in silver to the ton.

At the present time, in order to facilitate the extraction of ore, a lower tunnel is being run in the expectation that it will cut the vein at least 120 feet below the upper workings. This tunnel is now in a distance of 175 feet and the showing in the face would indicate the near presence of an ore body, and as soon as connections are made the company will be in good shape for regular and heavy shipments and the payment of dividends later on.

Another Incorporation.

Articles of incorporation of the Salt

The company yesterday received six cars of Horn Silver concentrates.  
Hon. C. V. Wheeler, president of the South Swansea, who was in from Silver City yesterday, states that the mine is in excellent shape, the tunnel being below the 550-foot level, while the ore body is holding its own in splendid shape.

There was an active demand on the curb yesterday afternoon for South Swansea at \$1.30, the lowest offering being at \$1.20, and it is claimed that the splendid showing in the mine will justify the payment of a higher figure than this.

Sam Pollock, of the Hercules, on Lion Hill, who was in the city yesterday, states that the property is looking in elegant shape and that from present indications it is only a question of depth before a large body of high grade mineral will be uncovered.

It is learned that Patsy Sullivan, a Mercur printer and newspaper man, has become so highly imbued with the flattering outlook for Beaver Lake district that he has left for the south with the intention of establishing a newspaper in this promising camp.
